

## First Increment Report

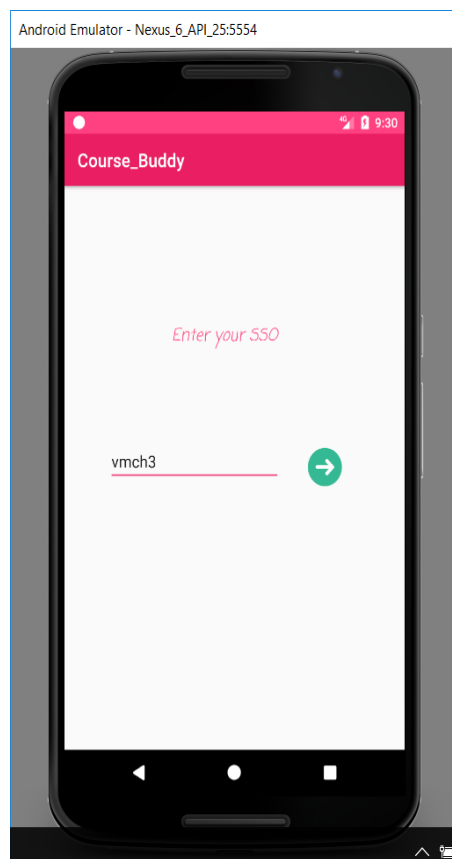

### Caller Buddy (App – App Calling)

In this Increment,

I implemented the app-app voice calling with user-ids and this feature is working perfectly with Sinch services.

Below are the screenshots of this app in action:

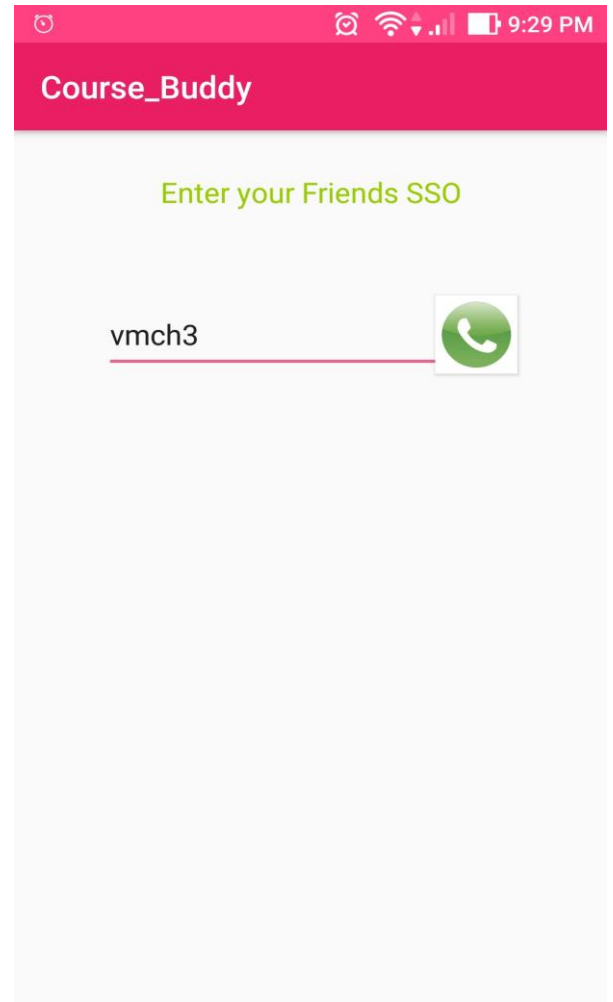

User A Signs in with his ID

User B Signs in with his ID

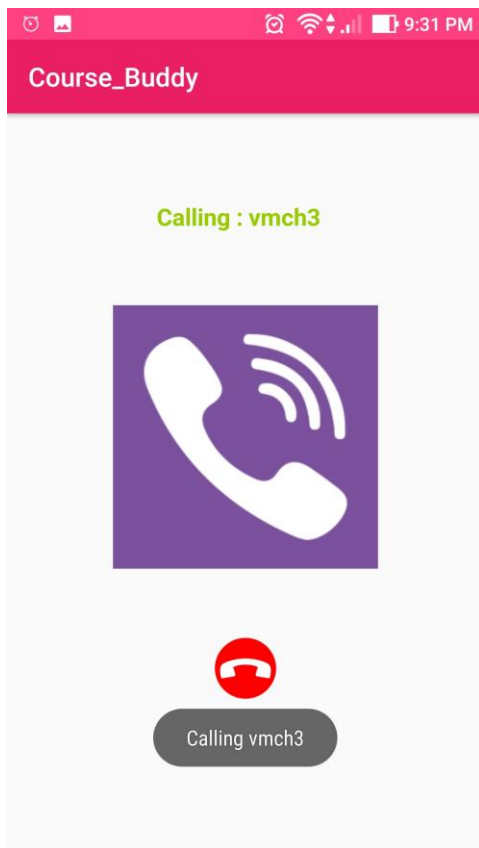

User B enters id of user A and  
click on Call icon to place a call.

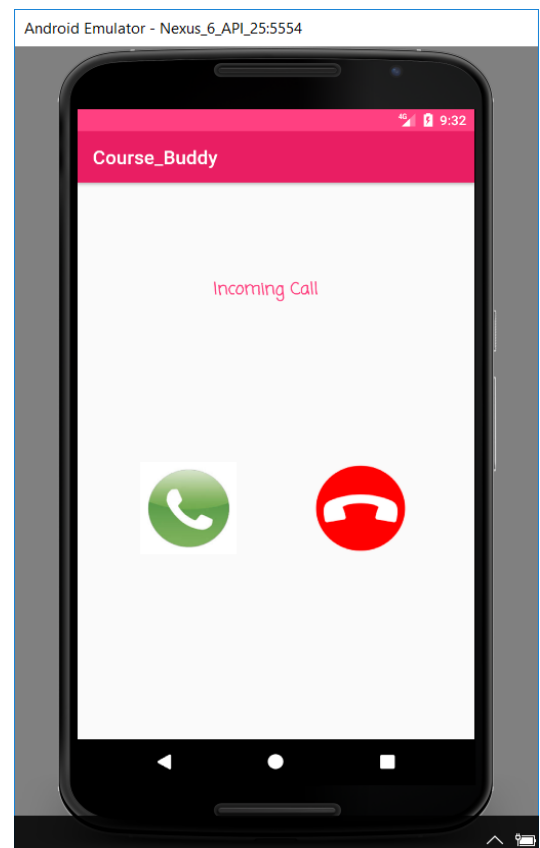

Now the call is placed using Sinch services(VoIP).

**The outgoing and incoming calls looks like the pictures shown below:**

## Outgoing Call from User B

## Incoming call to User A

## Next Increment Objective:

- ✚ Implement App – App video Calling for users.
- ✚ Improve UI Design.
